Education

University of Waterloo

Sep 2022 - May 2027

Bachelor of Computer Science

Waterloo, ON

- Specializing in Artificial Intelligence (GPA: 3.7/4.0)
- Coursework: Data Structures, Algorithms, OOP, Compilers, Operating Systems, AI, Databases
- Extracurriculars: Blueprint Technical Lead, Data Science Club Developer, Varsity FS

Experience

Databricks

May 2026 - Aug 2026

Software Engineer Intern, Node Runtime

Bellevue, WA

- Collaborated to build a Databricks native systemd service in Rust to replace kubelet as the node agent, enabling unified execution of microVMs and Kubernetes pods.
- Designed and implemented a workload orchestration system handling state persistence, lifecycle operations, self healing mechanisms, status management and container health monitoring.
- Built gRPC/TCP service APIs, readonly ports, and CLI tooling for node agent interaction, alongside an OS integration testing framework which sets up an Azure VM to run a full system validation.

Rippling

Jan 2026 - Apr 2026

Software Engineer Intern, Data Bridge

San Francisco, CA

- Decoupled deployments of rapidly evolving extraction components from stable core services in a data streaming ETL platform, enabling independent versioning and a safer testing process in production.
- Led the migration of 100,000+ workflows from Temporal to Kubernetes, establishing end-to-end observability via Datadog integrations and ensuring incremental rollouts using LaunchDarkly feature flags.

Amazon Web Services

May 2025 - Aug 2025

Software Engineer Intern, EKS

Vancouver, BC

- Optimized cluster provisioning time for an internal cluster management tool by over 1 week through refactoring CI/CD pipeline workflows and introducing system taints to automate cluster cordoning.
- Collaborated on the development of a CDK constructs library to help users launch production ready EKS environments with CloudFormation, following cell based architecture and Kubernetes best practices.

Ford Pro

Jan 2025 - Apr 2025

Software Engineer Intern

Toronto, ON

- Created a data migration pipeline, transferring 5,000+ company account records into a PostgreSQL database using GraphQL to handle API interactions and Google Cloud Run for serverless execution.
- Implemented a new user enrollment flow that enables companies to seamlessly register their users for Ford products, using Spring Boot, Java and Azure IAM.

Descartes Systems Group

May 2024 - Aug 2024

Software Engineer Intern

Waterloo, ON

- Engineered a geocoding service in C# and SQL that supports address validation across 18 different countries, integrating multiple third party APIs and implementing in-memory caching strategies to reduce latency.
- Migrated critical company applications from legacy frameworks to .NET Core through modularizing programs and refactoring 20,000+ lines of code to adopt MVC architecture.

Eon Media

Sep 2023 - Dec 2023

Software Engineer Intern

Remote

- Accelerated a video encoding pipeline to process 20× more videos daily and convert 12,000+ hours of MP4 content into HLS playlists by leveraging AWS Lambda to execute FFmpeg commands in parallel.
- Deployed a Slack chatbot in Python to deliver real time updates on active pipelines and control pipeline operations via chat commands, removing manual pipeline monitoring overhead.

Skills

Languages: Python, C++, Go, Rust, Java, SQL, Typescript

Frameworks & Tools: Kubernetes, Docker, Git, ReactJS, NodeJS, ExpressJS

Database & Cloud: AWS, Azure, PostgreSQL
